DELHI PUBLIC SCHOOL JANKIPURAM, LUCKNOW

SESSION 2024 - 2025 : REVISION SHEET

SUBJECT - SCIENCE - 086 (BIOLOGY)

Date : 5/9/24 Name : Mohd. Hifzaan Khan Class/Sec: IX/ D

Q1. Multiple Choice Questions

1. Cork cells are made impervious to water and gases by the presence of
(a) Cellulose (b) Lipids (c) lignin and suberin (d) Suberin

2. Select the correct pair that comprises of only unicellular organisms.
(a) Amoeba and Rhizopus (b) Paramecium and Chlamydomonas
(c) Bacteria and fungi (d) Plants and animals

3. Intestines absorbs the digested food materials. Which type of epithelial cells are responsible for that?
(a) Stratified Squamous Epithelium (b) Columnar Epithelium (c) Spindle Fibres (d) Cuboidal Epithelium

4. Find the living cells that provides mechanical strength to the plant.
(a) parenchyma (b) collenchyma (c) sclerenchyma (d) sclerotic cells

Q2. Assertion reason type question:

For question numbers **1, 2**, two statements are given- one labeled **Assertion (A)** and the other labeled **Reason (R)**. Select the correct answer to these questions from the codes (a), (b), (c) and (d) as given below:
a) Both A and R are true, and R is correct explanation of the assertion.
b) Both A and R are true, but R is not the correct explanation of the assertion.
c) A is true, but R is false. d) A is false, but R is true.

1. **ASSERTION:** Mitochondria and chloroplasts are semiautonomous organelles.
REASON: They are formed by division of pre-existing organelles and contain DNA but lack protein synthesizing machinery.

2. **ASSERTION:** Parenchyma cells help in storage of food.

REASON: Parenchyma cells are the main seats of photosynthesis.

3. **ASSERTION:** Vessel and sieve tube both are meant for transport purposes.
REASON: Vessels are lignified.

4. **ASSERTION:** Cell wall is a non-living part of the cell.
REASON: It offers protection, definite shape and support.

Q3. Very Short Answer Type Questions

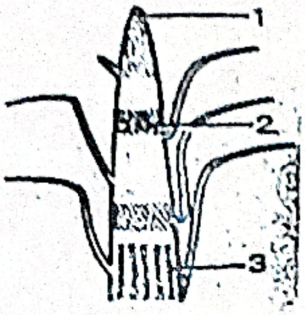

i. Meristematic cells have a prominent nucleus and dense cytoplasm but they lack vacuoles. Give reason.
ii. Name the following –
(a) Tissue that forms inner lining of our mouth.
(b) Name the type of tissue responsible for transmitting electrical signals in animals.
(c) Identify the tissue type that facilitates movement in animals.
(d) Name the tissue responsible for binding and supporting other tissues in the body.

Q4. Short Answer Type Questions

i. If cells of onion peel and RBC are kept in hypotonic solution, what will happen to each of them? Justify your answer.

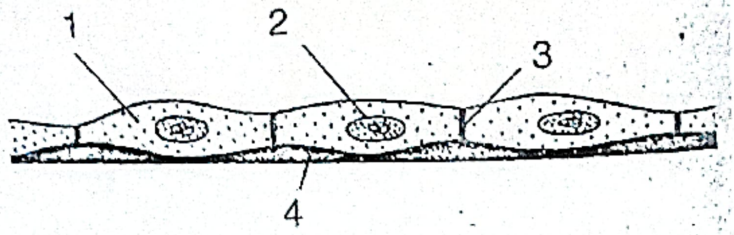

Scanned with OKEN Scanner

ii.

a) Analyse the given figure and identify it.
b) Label the parts marked 1 to 3.
c) What will happen If apical meristem is damaged or cut ?

iii.

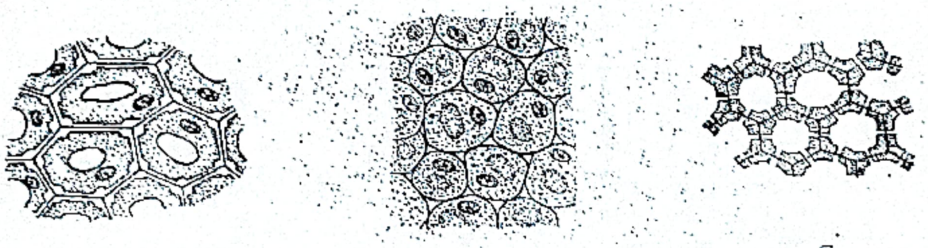

a) Analyse the provided image of animal tissue and accurately identify the type of tissue represented by explaining its key functions.
b) Label any two parts.

iv. With the help of diagram explain structure and function of mitochondria.

Q5. Long Answer Type Questions

i.

A B C

(a) Examine the provided figures A & B and accurately identify it.
(b) Among three of them, which one of them has heavy deposition of lignin?
(c) Which one of them provides both mechanical strength as well as flexibility?
(d) Which one of them can be modified to form air cavities in aquatic plants?

ii. Most tissues are made up of only one type of cells. Such tissues are called simple permanent tissue. Yet another type of permanent tissue called complex tissue is made up of more than one type of cells. All the cells co-ordinate to perform a common function. Xylem and phloem are examples of complex tissues. Both are conducting tissue and constitute vascular bundle.

(a) Which meristematic tissue is found in the cambium region of vascular bundle and write its function.

(b) How is Xylem different from phloem on the basis of living and dead components.

(c) Which among the simple permanent tissue has thickening of lignin also write the role of the tissue.

(d) Why are simple permanent tissue called so?
